ETS's graphical approach to item analysis is based on the estimation of a set of response curves for each item. The response curves show, at a glance, the difficulty and the discriminating power of the item and the popularity of each distractor at any level of the criterion variable (e.g., total score).

same approach over and over, and they come to realize that the type of function \mathcal{A}' defined by $y = \mathcal{A}'(x)$ under consideration does not matter when providing graphical support. For example, using the x-intercept method, the student sees that x-values of x-intercepts of the graph of $y = \mathcal{A}'(x)$ correspond to real solutions

College Algebra A Graphical Approach

A graph provides a visual method of determining the limit of a function. If the function has a limit as x approaches a , the branches of the graph will approach the same y -coordinate near $x = a$ from the left and the right. See . A table can be used to determine if a function has a limit.
