Trend: 50%–90% of chip is digital and 10%–50% is analog. Die is mostly digital Engineers optimize technologies for digital circuits. Design-Time Syndrome: In a 10% analog–90% digital die, 10% analog requires 90% of total design time. Pass(attempts)-to-Success Ratio: Digital Designs 1 and Analog Designs 2–3.

Analog Integrated Circuit Design Why?

Preface v much better position to interpret a manufacturer's data if he or she has a working knowledge of the internal operation of the integrated circuit. The contents of this book stem largely from courses on analog integrated circuits given at the University of California at the Berkeley and Davis campuses.

The input offset voltage of a comparator is the input voltage at which its output changes from one logic level to the other. It may be caused by device mismatch or may be inherent to the design of a comparator. Random circuit noise can cause the output to change from one logic level to the other, even when the comparator input is held constant.
