

berg tymoczko stryer biochemistry pdf

A ketogenic amino acid is an amino acid that can be degraded directly into acetyl-CoA, which is the precursor of ketone bodies. This is in contrast to the glucogenic amino acids, which are converted into glucose. Ketogenic amino acids are unable to be converted to glucose as both carbon atoms in the ketone body are ultimately degraded to carbon dioxide in the citric acid cycle.

Ketogenic amino acid - Wikipedia

The following outline is provided as an overview of and topical guide to biochemistry: . Biochemistry â€“ study of chemical processes in living organisms, including living matter. Biochemistry governs all living organisms and living processes.

Outline of biochemistry - Wikipedia

Light-independent reactions take place in plant chloroplasts. In this process sugars are made from carbon dioxide. The process, known as the Calvin cycle, uses products of the light-dependent reactions (ATP and NADPH) and various enzymes. Therefore, the light-independent reaction cannot happen without the light-dependent reaction.
