Close replications are an important part of cumulative science. â€œ Yet, little agreement exists about what
makes a replication convincing. â€œ We develop a Replication Recipe to facilitate close replication attempts.

The Replication Recipe: What makes for a convincing

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its
rigid structure which is so different from writing in the humanities. One reason for using this format is that it is
a means of efficiently communicating scientific findings to the broad community of scientists in a uniform
manner.

How to Write Guide: Sections of the Paper - Bates College

Confounding Variables. In an experiment, we are often interested in the effect of an independent variable on
a dependent variable. A confounding variable is a variable that confuses the relationship between the
independent and the dependent variable.

Epidemiology Key Terms and Core Concepts

In statistics, a mediation model is one that seeks to identify and explain the mechanism or process that
underlies an observed relationship between an independent variable and a dependent variable via the
inclusion of a third hypothetical variable, known as a mediator variable (also a mediating variable,
intermediary variable, or intervening variable).

cattle farmers. In the sequel, we present our questionnaire and experimental design (Section 2), we
characterise the distributions of the key response variables (section 3), consider correlations between the risk

Can We Measure Individual Risk Attitudes in a Survey?

Highlights We explore the merits and weaknesses of between-subjects and within-subjects designs in experimental work. We describe experiments in economics and in psychology that make comparisons using either of these designs (or both) that sometimes yield the same results and sometimes do not. Both have advantages; between-subjects designs are more conservative, but have less power. The ...

22 2 Study Design Designing a research study is not a simple task. Just as the key elements and determinants of outcomes of war are fixed even before it is fought (i.e., at its

Study Design - Jones & Bartlett Learning

In physics, hidden-variable theories are held by some physicists who argue that the state of a physical system, as formulated by quantum mechanics, does not give a complete description for the system. An example would be that quantum mechanics is ultimately incomplete, and that a complete theory would provide descriptive categories to account for all observable behavior and thus avoid any ...
