

functional english class 12 pdf

In computer science, functional programming is a programming paradigm—a style of building the structure and elements of computer programs—that treats computation as the evaluation of mathematical functions and avoids changing-state and mutable data. It is a declarative programming paradigm, which means programming is done with expressions or declarations instead of statements.

It's not hard to write IO code in pure functional languages. They all provide a simple mechanism for writing IO code that works just like it does in imperative languages. All they do is enforce that you can't call IO code inside other code whose interface is declared as not performing IO. An analogy would be a dynamic language programmer complaining that a statically typed language like Java ...
