EE 323 - Noise 16 146 CHAPTER 8: NOISE AND NOISE REDUCTION TECHNIQUES 1. NOISE SOURCES

Noise can be characterized as any disturbance that tends to obscure a desired signal. Noise can be generated within a circuit or picked up from external natural or artificial sources. When noise is

Noise Reduction in Speech Applications provides a comprehensive introduction to modern techniques for removing or reducing background noise from a range of speech-related applications. Self-contained, it starts with a tutorial-style chapter of background material, then focuses on system aspects, digital algorithms, and implementation.

Noise is the result of errors in the image acquisition process that results in pixel values that do not reflect the

true intensities of the real scene. Noise reduction is the process of removing noise from a signal. Noise reduction techniques are conceptually very similar regardless of the signal being processed,

Efficient Technique for Color Image Noise Reduction

This updated and expanded version of the very successful first edition offers new chapters on controlling the emission from electronic systems, especially digital systems, and on low-cost techniques for providing electromagnetic compatibility (EMC) for consumer products sold in a competitive market. There is also a new chapter on the susceptibility of electronic systems to electrostatic discharge.

Noise reduction techniques in electronic systems - Henry W

Normally the noise control program will be started using as a basis A-weighted immission or noise exposure levels for which the standard ISO 11690-1 recommends target values and the principles of noise control planning. A more precise way is to use immission and emission values in frequency bands as follows.

An Overview of Aircraft Noise Reduction Technologies The aim of this article is to provide a broad overview of current and future noise reduction technologies used in aircraft industries. It starts by recalling the regulation framework and the European incentives that have triggered efforts in this domain, as

EMI Reduction Techniques Electromagnetic interference (EMI) is increasing as a result of higher clock speeds in today's PCs and workstations. This radiation, mainly produced by fundamental and low-order harmonics, unfortunately coincides and interferes with many popular radio FM bands. This has forced the regulatory agencies
