Owing to its wide (3.4 eV) and direct-tunable band gap, gallium nitride (GaN) is an excellent material platform for UV photodetectors. GaN is also stable in radiation-rich and high-temperature environments, which makes photodetectors fabricated using this material useful for in-situ flame detection and combustion monitoring.

In quantum physics, unitarity means that the future point is unique, and the past point is unique. If no information gets lost on the transition from one configuration to another it is unique. If a law exists on how to go forward, one can find a reverse law to it. It is a restriction on the allowed evolution of quantum systems that ensures the sum of probabilities of all possible outcomes of ...
